# Introduction

Waldur is a platform for managing hybrid cloud resources. It is used both for controlling internal enterprise IT resources and for selling cloud services. Waldur is composed of the following main components:

- Waldur MasterMind - broker and orchestrator of cloud services. Responsible for technical service delivery and connected matters. Exposes REST API for management

- Waldur HomePort - web-based self-service portal. Talks REST to MasterMind.

Waldur is open-source, extendable and comes with a professional support provided by OpenNode.

To get a quick feeling what Waldur is, take a look at some screenshots.

If you are interested in deploying, check the getting started section!
